
EXECUTIVE SUMMARY REPORT

ADDITIONS & REMODELING TO: KROMREY MIDDLE SCHOOL

01/16/2015

What's New?

The demolition of the structure of the old Kromrey is complete and removal of the old foundations are nearing completion. Work on foundations for the new gym continues in preparation for the arrival of the precast gym wall panels.

The Past Weeks

- Demolition of old Kromrey
- Footings and foundations
- Began geothermal well drilling

Coming Up in the Weeks Ahead

- Footings and foundations
- Precast gym wall panel installation

The foundation wall above will form the east wall of the new gym.

The structure of the old Kromrey is completely down.

Did you know? Concrete mixes are custom tailored to each application. For the foundation walls, an air entrained mixture is used. Air entraining is accomplished by incorporating chemical admixtures into the concrete to create tiny air bubbles. These air bubbles make the concrete more durable and resistant to the freeze-thaw cycle of the ground.
