
EXECUTIVE SUMMARY REPORT

ADDITIONS & REMODELING TO: KROMREY MIDDLE SCHOOL

04/24/2015

What's New?

Work is progressing outside the building on the brick fascade. Inside masonry walls are underway in the GTT Area. In only a couple weeks painting will begin!

The Past Weeks

- Spray foam insulation on exterior gym walls
- Interior masonry walls
- Exterior masonry veneer
- Gym MEP rough-ins

Coming Up in the Weeks Ahead

- Exterior masonry veneer
- Gym MEP rough-ins
- GTT MEP rough-ins

Interior masonry is nearly complete in the new GTT area.

Duct work and electrical rough-ins are underway in the new gym.

Exterior masonry is progressing around the gym.

Did you know? The masonry façade on the building serves as a “rain screen”. This works in conjunction with the yellow closed cell foam insulation to create an air and water tight wall assembly. Because masonry is porous, an air cavity is left between the masonry and insulation to allow air and water vapor to circulate freely.
